

## Get Attic Inspections: Prevent Mold, Tenant Calls and Costly Repairs

Hot humid air in the attic leads to:

- Raised heating and cooling costs
- Condensation
- Mold
- Respiratory issues
- Roof damage
- Reduced life of roof
- Unhappy tenants

# ATTICS

## Proper Air Flow is Essential

- Soffits – Cool, Fresh Air Enters the Attic Space.
- Interior Exhaust Fans & Ducting – Interior exhaust fans need to be vented through ducting to a roof vent directly above to prevent warm, moist air from being released into the attic space.
- Roof Airflow Vent – Required so warm air from inside the attic space can escape allowing for proper air flow and circulation.
